

1. For both the HS and Academy, there are no approved manufacturers or approved fixtures. I want to make sure that I am bidding the most appropriate fixtures for the expectations of the schools. There is a large spread of fixtures that meet the specifications listed at widely varying price points.

Alabama bid law prohibits us from specifying manufacturers to ensure equitable bids and opportunities. We provide specifications that we are looking for in certain items or give a model of as an example and request its equivalent item can be submitted as a response

2. We will need to know the number of existing houselights and approximate locations in order to include these in the pricing.

All existing materials will be removed and this will be a new installation instead of a retrofit.

3. There is no power or data distribution listed, and a called-out wall panel DMX Preset Recall system. Can you provide us with the existing dimmer/relay rack information, the control network information, and existing control console(s) information?

This will be an entirely new system. Dothan City Schools will be responsible for providing power and data uplink.

4. A member of our sales team has already done a site visit there to discuss the rigging, will we be required to attend the pre-bid meeting still?

Yes

5. The drawings provided are proving to be rather illegible. They are very small and zooming in Bluebeam does not increase the legibility. Will additional drawings be made available that can be zoomed in and read through Bluebeam or other PDF reader

We will update the map to a higher quality attachment. Adobe Acrobat is the standard PDF viewer which should be able to be used without any issues.
